

Public Access Security Solutions for Schools

WelcomeID™ software provides a suite of solutions that enable educational institutions to ensure safety and security throughout the school day, increase productivity and maximize reimbursement from federal programs.

Schools are faced with many “point-to-point” transfers that require measures to ensure security, safety and efficiency. WelcomeID™ solutions are designed to help carry out transfer procedures without a need to change existing plans and measures. The technology is built on school policy and is flexible enough to adapt to most situations.

Many districts have the desire to improve security measures but wrestle with budgetary restrictions. WelcomeID™ solutions are built upon existing school resources. The products avoid technology swapping while working seamlessly within the school’s infrastructure to make useful data available anywhere.

Leverage Real-Time Access to Data

- Monitor students, staff, visitors, buses, meals and assets in real time
- Use real time information to manage & allocate resources in an emergency

Scalable, Flexible Technology

WelcomeID™
Software uses 2D barcodes placed on Student ID cards, inventory, visitor passes and backpacks. Encrypted 2D barcodes contain information about the person or object and is scanned at designated checkpoints on or off campus. Scanned data is transmitted wirelessly to command modules installed throughout the school to confirm identity, attendance, arrival or count.

Improve School Personnel Efficiency

- Automatically collect and access accurate, relevant and timely data
- Eliminate paperwork

Actively Manage School Operations

- Measure service levels – bus, truancy officers, maintenance, cafeteria, etc.
- Third party audit provides data needed to comply with federal regulations and maximize collection of federal funding

Fast, Low Cost Implementation

- Simple to deploy and easily scalable
- Use solution on low-cost, multi-function devices
